

# SIRIS™ Stable Thumb Splint

## *Options*

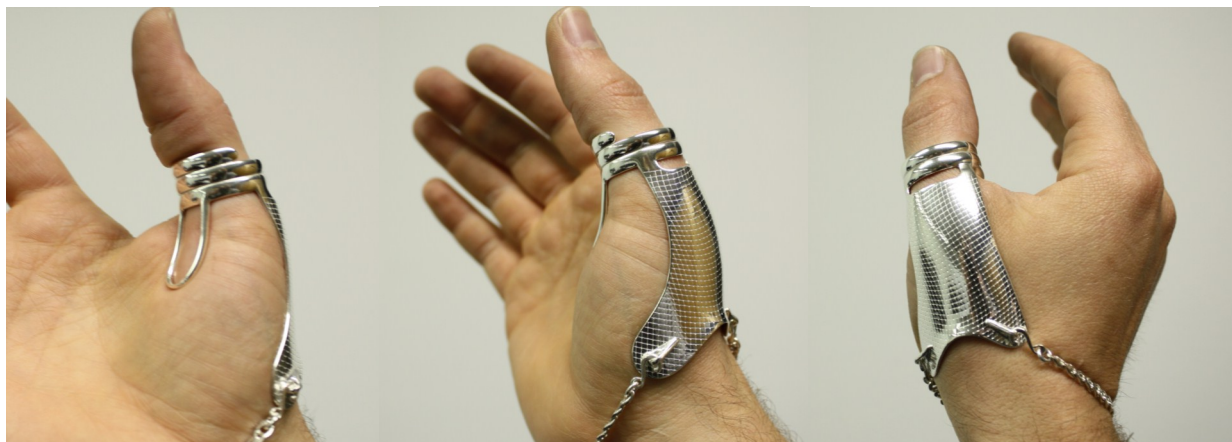

There are three dorsal plate options when choosing the SIRIS™ Stable Thumb Splint (product code - ST)

- “Standard” has a plate which is 5.25 cm long
- “Long” has a plate which is 6.0 cm long
- “3D” has a plate which incorporates an ulnar support and a proximal radial extension. Additionally, the distal ring has been changed to a Spiral Splint for adjustability and leverage to block radial deviation. With the spiral compressed, the total length is 6.25 cm. (just the plate is approx. 5.85 cm)

The Bracelet can be wrapped around the wrist in two ways depending on patient’s preference and comfort.

Below are additional pictures of the ST “3D” that better show changes in the dorsal plate and more of the spiral used as the distal ring.
